

**HINDUSTAN**  
INSTITUTE OF TECHNOLOGY & SCIENCE  
(DEEMED TO BE UNIVERSITY)

**DEPARTMENT OF CIVIL ENGINEERING**

**CURRICULUM AND SYLLABUS**

**(Applicable for Students admitted from Academic Year 2020-21)**

**M. Tech. Structural Engineering and Construction Management**

**DEPARTMENT OF CIVIL ENGINEERING**

**SCHOOL OF BUILDING SCIENCES**

# **M.TECH STRUCTURAL ENGINEERING AND CONSTRUCTION MANAGEMENT**

## **PROGRAM EDUCATIONAL OBJECTIVES**

**PEO 1:**The graduates will demonstrate competence in analysis and design principles and adopt new technologies for solving multi-disciplinary problems.

**PEO 2:**The graduates will practice as professional engineers and project managers, achieving sustainability and economic objectives through ethical practices.

**PEO 3:**The graduates will be socially committed researchers and entrepreneurs with an aptitude for knowledge dissemination and lifelong learning.

**PROGRAMME OUTCOMES (POs)**

**1. Scholarship of Knowledge:**

Acquire in-depth knowledge of specific discipline or professional area, including wider and global perspective, with an ability to discriminate, evaluate, analyse and synthesize existing and new knowledge, and integration of the same for enhancement of knowledge.

**2. Critical Thinking**

Analyse complex engineering problems critically, apply independent judgement for synthesizing information to make intellectual and/or creative advances for conducting research in a wider theoretical, practical and policy context.

**3. Problem Solving**

Think laterally and originally, conceptualise and solve engineering problems, evaluate a wide range of potential solutions for those problems and arrive at feasible, optimal solutions after considering public health and safety, cultural, societal and environmental factors in the core areas of expertise.

**4. Research Skill**

Extract information pertinent to unfamiliar problems through literature survey and experiments, apply appropriate research methodologies, techniques and tools, design, conduct experiments, analyse and interpret data, demonstrate higher order skill and view things in a broader perspective, contribute individually/in group(s) to the development of scientific/technological knowledge in one or more domains of engineering.

**5. Usage of modern tools**

Create, select, learn and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modelling, to complex engineering activities with an understanding of the limitations.

**6. Collaborative and Multidisciplinary work**

Possess knowledge and understanding of group dynamics, recognize opportunities and contribute positively to collaborative-multidisciplinary scientific research, demonstrate a capacity for self-management and teamwork, decision-making based on open-mindedness, objectivity and rational analysis in order to achieve common goals and further the learning of themselves as well as others.

**7. Project Management and Finance**

Demonstrate knowledge and understanding of engineering and management principles and apply the same to one's own work, as a member and leader in a team, manage projects efficiently in respective disciplines and multidisciplinary environments after consideration of economical and financial factors.

**8. Communication**

Communicate with the engineering community, and with society at large, regarding complex engineering activities confidently and effectively, such as, being able to comprehend and write effective reports and design documentation by adhering to appropriate standards, make effective presentations, and give and receive clear instructions.

### **9. Life-long Learning**

Recognize the need for, and have the preparation and ability to engage in life-long learning independently, with a high level of enthusiasm and commitment to improve knowledge and competence continuously.

### **10. Ethical Practices and Social Responsibility**

Acquire professional and intellectual integrity, professional code of conduct, ethics of research and scholarship, consideration of the impact of research outcomes on professional practices and an understanding of responsibility to contribute to the community for sustainable development of society.

### **11. Independent and Reflective Learning**

Observe and examine critically the outcomes of one's actions and make corrective measures subsequently, and learn from mistakes without depending on external feedback.

**M.TECH. STRUCTURAL ENGINEERING AND CONSTRUCTION  
MANAGEMENT**

**SEMESTER I**

<b>M.TECH – STRUCTURAL ENGINEERING AND CONSTRUCTION MANAGEMENT</b>

<b>COURSE TITLE</b>		<b>CONSTRUCTION PROJECT PLANNING AND SCHEDULING</b>		<b>CREDITS</b>	<b>3</b>
<b>COURSE CODE</b>	<b>CEA4701</b>	<b>COURSE CATEGORY</b>	<b>PC</b>	<b>L-T-P</b>	<b>3-0-0</b>
<b>CIA</b>	<b>50%</b>			<b>ESE</b>	<b>50%</b>
<b>LEARNING LEVEL</b>	<b>BTL 3</b>				
<b>CO</b>	<b>COURSE OUTCOMES</b>			<b>PO</b>	
<b>Students will be able to</b>					
1.	Identify the framework of construction industry, project life cycle and parties involved in construction project.			1, 2, 3, 7, 9	
2.	Plan and conduct a feasibility study of site and apply the concepts of planning for the activities of construction projects			1, 2, 3, 7, 9	
3.	Prepare detailed estimates, resource requirements and project cost			1, 2, 3, 7, 9, 10	
4.	Use network techniques like CPM and PERT for planning and scheduling projects.			2, 3, 5, 7, 9	
5.	Apply the concept of Earned Value Analysis and use BIM for monitoring and control of projects			2, 3, 5, 7, 9, 10	
<b>Prerequisites : Nil</b>					
<b>MODULE 1 : CONSTRUCTION PROJECT</b>					<b>(9)</b>
Introduction-Construction industry segments- general building construction, engineering construction, construction industry characteristics – overview of construction project life cycle - different phases –pre project phase- selection of project delivery system, traditional design-tender-build, design-build, the parties and their roles, project manager.					
<b>MODULE 2 : CONSTRUCTION PLANNING</b>					<b>(9)</b>
Introduction – consultant selection, site investigation & selection, land acquisition, preliminary cost estimate, basic concepts in the development of construction plans – Cost and Benefit of Planning – Types of Plan – Planning for Construction – The Planning Process in the project Cycle – The Context of Construction Project Planning - Defining Work Tasks -Defining Precedence relationships among activities - Estimating Activity Durations.					
<b>MODULE 3: COST ESTIMATING</b>					<b>(9)</b>
Estimating process – types of estimates – preparation of detailed estimates for buildings and roads - Cost estimation for item of work – method of structuring project cost - elements of net project cost – labor, material, equipment requirement, sub contract work, provisional and prime cost allowances, site overheads, company overheads.					
<b>MODULE 4 : PROJECT SCHEDULING</b>					<b>(9)</b>
Program planning and scheduling – work breakdown structure, bar chart, network schedules, general concept, computer application, relevance of construction schedules-the critical path method- Calculations for critical path scheduling-Activity float and schedules-Presenting project schedules-Critical path scheduling for Activity-on-node and with leads, Lags and Windows – concept of PERT.					
<b>MODULE 5: PROJECT MONITORING AND CONTROL</b>					<b>(9)</b>
Monitoring and control- schedule updating-cost control-definition of earned value – importance of earned value analysis – schedule variance, cost variance, scheduled performance index, cost performance index methods of determining earned value. Building Information Modeling – definitions, advantages, levels of information management, development of 4D CADD.					
<i>On completion of the course, the students have to submit a term project report.</i>

COURSE TITLE		PROJECT FORMULATION AND CONTRACT REGULATIONS		CREDITS	3
COURSE CODE	CEA4702	COURSE CATEGORY	PC	L-T-P	3-0-0
CIA	50%		ESE	50%	
LEARNING LEVEL	BTL 3, 4, 5				
CO	COURSE OUTCOMES			PO	
Students will be able to					
1.	Identify project financing and costing and apply the principles of cash flow, time value of money and cost of capital in project			1, 2, 3, 7, 9	
2.	Identify the different aspects of project appraisal and examine the various methods of investment appraisal.			1, 2, 3, 7, 9	
3.	Distinguish the different elements and procedures in the preparation of contracts and NCB document.			1, 2, 3, 7, 9, 10	
4.	Explain the various taxes, legal requirement, exercise and customs duties, property laws and statutory regulations.			2, 3, 5, 7, 9	
5.	Compare the characteristics of various infrastructure projects, models and regulatory bodies.			2, 3, 5, 7, 9, 10	
<b>Prerequisites : Nil</b>					
<b>MODULE 1 : PROJECT FORMULATION AND COSTING</b>					<b>(9)</b>
Generation and Screening of Project Ideas-Project Identification-Preliminary Analysis, Market, Technical, Financial, Economic and Ecological-Pre-Feasibility Report, various local approvals and clearances for land and building - Statutory Regulations for town and country planning, development control rules - Detailed Project report. Means of Finance -Key Financial Indicators, Project cash flows- components, basic principles of cash flow estimation, concept of time value of money.					
<b>MODULE 2 : PROJECT APPRAISAL</b>					<b>(9)</b>
Market, Technical, and Environment appraisal, Financial, Economic appraisal - Cost of Capital-cost of production, working capital requirement - Net Present Value-Benefit Cost Ratio-Internal Rate of Return-Accounting Rate of Return- Urgency-payback period-Assessment of Various Methods-Indian and international Practice of Investment Appraisals.					
<b>MODULE 3: CONTRACT LAW AND BIDDING PROCESS</b>					<b>(9)</b>
Introduction to construction law - civil and common law-common delivery methods- Comparison of Actions and Laws- Law Governing Contracts, - Indian contract act - Elements of Contracts- World bank procedure and guideline, National competitive bidding (NCB) document – various clauses, Prequalification-Bidding-Accepting-Evaluation of Tender from Technical, Contractual and commercial points of view – International standard contract document - FIDIC –Other standard forms of construction contracts.					
<b>MODULE 4 : DISPUTE, CLAIM AND ARBITRATION</b>					<b>(9)</b>

Contract and Related Issues-Consequences of Breach of Contract- Potential contractual problems, variations, claims, claim management, construction dispute boards Law of damages and extension of Time-Construction claims and Disputes-Mechanism of dispute Resolution-Agreements, subject Matter-Violations. Arbitration: Laws Related to Construction Arbitration in India-Present Status, opportunities and Challenges-Institutional Arbitration-Promotion of Arbitration-International Arbitration-Training of Arbitrators on Ethics-Appointment of Arbitrators- Conditions of Arbitrations-Powers and duties of Arbitrator-Rules of Evidence-Enforcement of Award Costs-Arbitration and conciliation(Amendment) Act - Insurance and Bonds.

**MODULE 5: CONCEPT OF INFRASTRUCTURE PROJECTS (9)**

Types of project – EPC, Design/Build contracts- Infrastructure development potential as per five year plans, central level and state level development, definition and characteristics of infrastructure projects and project stakeholders, Public Private Partnership – BOT models, model concession agreement, benefits -Technology Transfer and Foreign Collaboration-Scope of Technology Transfer. Case studies on Design-Build project contracting.

*On completion of the course, the students have to submit a term project report.*

<b>COURSE TITLE</b>	<b>ADVANCED STRUCTURAL ANALYSIS</b>			<b>CREDITS</b>	<b>3</b>
<b>COURSE CODE</b>	<b>CEA4703</b>	<b>COURSE CATEGORY</b>	<b>PC</b>	<b>L-T-P</b>	<b>3 -0- 0</b>
<b>CIA</b>	<b>50%</b>			<b>ESE</b>	<b>50%</b>
<b>LEARNING LEVEL</b>	<b>BTL 4, 5</b>				
<b>CO</b>	<b>COURSE OUTCOMES</b>				<b>PO</b>
The Students will be able to					
1	Analyse the structural elements using displacement method.				1,2,3,5,9,10,11
2	Analyse beam and plane frames using MATLAB				1,2,3,9,10,11
3	Analyse Beam and Truss Elements using FEM method.				1,2,3,9,10,11
4	Derive shape functions for various 2-D and 3-D elements				1,2,3,5,9,10,11
5	Derive shape functions for higher order elements.				1,2,3,5,9,10,11
<b>Prerequisites: B.Tech.</b>					
<b>MODULE 1: ANALYSIS OF STRUCTURAL ELEMENTS USING STIFFNESS METHOD</b>					<b>9</b>
Introduction to Matrix Methods - Determinate- Indeterminate Structures-displacement formulation - analysis of continuous beams. Transformation of System Displacement to Element Displacement-Element Stiffness to System Stiffness-Transformation of Forces and Displacements -analysis of rigid plane frames.-3D rigid frames					
<b>MODULE 2: ANALYSIS OF STRUCTURES USING MATLAB</b>					<b>9</b>
Programming techniques – Analysis of Beams and plane frames using MAT LAB and evaluate with classical methods.					
<b>MODULE 3 : MATHEMATICAL FOUNDATIONS OF FINITE ELEMENT METHOD</b>					<b>9</b>
Historical background - Influence of Computer Development on Computational Mechanics – Approximate Solution - Discretization of Continuum Structures - Characterization of 1D, 2D and 3D problems based on Aspect ratio - Strain - displacement, Stress-strain and equilibrium equations - Constitutive Matrix - Concept of a finite element - Shape Function - Derivation of element stiffness equation - Illustration through application to bar, beam and truss problems - Temperature effects - p and h mesh refinement - Adaptive refinement.					
<b>MODULE 4: TWO AND THREE DIMENSIONAL SIMPLEX ELEMENTS</b>					<b>9</b>
Plane Stress, Plane Strain and Axi-symmetric Problems - CST element - Derivation of Shape Function - Various loading conditions like body force, surface force and temperature change - Tetrahedron element - Introduction to Plate and Shell elements.					
<b>MODULE 5: HIGHER ORDER ELEMENTS AND ISOPARAMETRIC MAPPING</b>					<b>9</b>
Need for higher order elements - Generation of shape functions - Lagrange interpolation - QUAD4, QUAD8 and QUAD9 elements for 2D problems - BRICK8 element for 3D problems - Isoperimetric Mapping - Gauss quadrature.					
<i>On completion of the course, the students have to submit a term project report.</i>

<b>Students will be able to</b>						
1.	Identify research problems and formulate the methodology.			1,2,3,4,6		
2.	Prepare effective research report based on literature.			1,2,3,4,6,7		
3.	Adopt suitable sampling techniques to analyse data and interpretation of results.			1,2,3,4,6,9		
4.	Utilize the knowledge gained on IPR and apply for innovative ideas and products.			1,2,3,4,9,10, 11		
5.	Utilize the knowledge gained on patent rights for licencing and transfer of technology with new developments in IPR			1,2,3,4,5		
<b>Prerequisites : Nil</b>						
<b>MODULE 1 : RESEARCH PROBLEM FORMULATION</b>					<b>(6)</b>	
Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations						
<b>MODULE 2 : RESEARCH PROPOSAL AND ETHICS</b>					<b>(6)</b>	
Effective literature studies approaches, analysis Plagiarism, Research ethics, Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.						
<b>MODULE 3 : DATA ANALYSIS AND INTERPRETATION</b>					<b>(6)</b>	
Classification of Data, Methods of Data Collection, Sampling, Sampling techniques procedure and methods, Ethical considerations in research Data analysis, Statistical techniques and choosing an appropriate statistical technique, Hypothesis, Hypothesis testing, Data processing software (e.g. SPSS etc.), statistical inference, Interpretation of results.						
<b>MODULE 4 : NATURE OF INTELLECTUAL PROPERTY</b>					<b>(6)</b>	
Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.						
<b>MODULE 5 : PATENT RIGHTS AND NEW DEVELOPMENTS IN IPR</b>					<b>(6)</b>	
Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Students will be able to					
1.	Independently study and investigate current research areas and share ideas while actively participating in presentation			4, 6,7,8	
2.	Develop writing skills and prepare reports			4, 6,7,8	
3.	Present and defend their research at seminars and conferences			4, 6,7,8	
<b>Prerequisites : Nil</b>					
<p>This work should consist of soft bound report on any technical topic of interest associated with the post graduate course and should be submitted in a standard format having the following contents.</p> <ul style="list-style-type: none"> <li>(i) Introduction</li> <li>(ii) Literature survey</li> <li>(iii) Theoretical contents</li> <li>(iv) Field applications, case studies</li> <li>(v) Relevance to the present national and global scenario of construction industry</li> <li>(vi) Strength and weaknesses of the particular area of seminar</li> <li>(vii) R &amp; D in the particular area</li> <li>(viii) Benefit cost studies – feasibility studies</li> <li>(ix) Vendors associated</li> <li>(x) Conclusions</li> <li>(xi) References</li> </ul> <p>Students should prepare a power point presentation to be delivered in fifteen minutes and should be able to answer questions asked in remaining five minutes. Where ever possible, the topic for the seminar may be decided on the mini project or the main project work to be done in semester II, III. The students will be evaluated through an end semester examination by a team of internal staff.</p>					

## SEMESTER II

COURSE TITLE		STRUCTURAL DYNAMICS AND ASEISMIC DESIGN		CREDITS	3	
COURSE CODE		CEA4704	COURSE CATEGORY	PC	L-T-P	3 -1- 0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL 4, 5, 6				
C O	COURSE OUTCOMES			PO		
The Students will be able to						
1	Distinguish between the behaviour of static and dynamic analysis and Analyse SDOF systems			1,2,3,4,5,9		
2	Analyse MDOF systems			1,2,3,4,5,9		
3	Describe the response of structures subjected to Earthquake.			1,2,3,4,5,9		
4	Design reinforced concrete structures using the codal provisions.			1,2,3,4,5,9		
5	Design earthquake resistant structures, masonry structures, bridges and dams for earthquake and adopt appropriate vibration control techniques.			1,2,3,4,5,9		
<b>Prerequisites: Nil</b>						
<b>MODULE 1: INTRODUCTION TO DYNAMICS</b>					<b>(9L+3P)</b>	
Structural dynamics – free vibration – forced vibration – SDOF – Response of SDOF systems – Response to general dynamic loading – Duhamel’s Integral – Response to earthquake loading – Response spectrum.						
<b>MODULE 2: FREE AND FORCED VIBRATION OF MULTIPLE DEGREES OF FREEDOM SYSTEM</b>					<b>9</b>	
MDOF s/m – free vibration – forced vibration – earthquake response - Nonlinear method of analysis - Wilson- $\theta$ Method - Newmark-beta method - Response of MDF systems to support motion						
<b>MODULE 3: RESPONSE OF STRUCTURES TO EARTHQUAKE</b>					<b>9</b>	
Building Systems - Rigid Frames, Braced Frames, Shear Walls - Behaviour of RC, steel and prestressed concrete elements under cyclic loading - Soil performance						
<b>MODULE 4: EARTHQUAKE RESISTANT DESIGN &amp; CODE PROVISIONS</b>					<b>9</b>	
Concept of Earthquake Resistant Design - Provisions of Seismic Code IS 1893 (Part I) - 2002 - Response Spectrum - Design Spectrum - Structural Configuration - 3 D computer analysis of building (Theory) - Design and Detailing of Frames, Shear Walls and Framed Walls - Provisions of IS-13920.						
<b>MODULE 5: DESIGN PROVISIONS AND VIBRATION CONTROL</b>					<b>9</b>	
Design of Non-Engineered construction - strengthening of buildings - Design Provisions for Bridges and Dams. Modern Concepts - Base Isolation - Adoptive systems - Case studies.						
<i>On completion of the course, the students have to submit a term project report.</i>

CIA	50%			ESE	50%
LEARNING LEVEL	BTL 3, 4,5,6				
CO	COURSE OUTCOMES				PO
<b>The Students will be able to</b>					
1	Identify the philosophy involved in the limit state design of steel concrete composite structures.				1,2,3,4,9,10
2	Design the steel concrete composite beams with deck slabs				1,2,3,4,9,10
3	Design the steel concrete composite columns and trusses				1,2,3,4,9,10
4	Assess the behaviour of composite box girders.				1,2,3,4,9,10
5	Assess the seismic behavior of composite structures.				,2,3,4,9,10
<b>Prerequisites :</b>					
<b>MODULE 1: INTRODUCTION</b>					<b>9</b>
Review of Limit State Design of steel columns and beams - Introduction to steel concrete composite structures - concepts and Theory – Typical shear connectors and interaction with concrete - Tests for strength of shear connections. Limit state design of steel concrete composite construction. Comparison of EC4 and IS Codes.					
<b>MODULE 2 :DESIGN OF COMPOSITE BEAMS</b>					<b>9</b>
Behaviour of simply supported and continuous steel - concrete composite beams with solid deck slabs and profiled deck slabs.					
<b>MODULE 3: DESIGN OF COMPOSITE TRUSSES AND COLUMNS</b>					<b>9</b>
Behaviour and design of steel concrete composite Trusses - Shear connection details – Design of Steel concrete columns.-Encased columns, Concrete filled steel tubes.					
<b>MODULE 4 : COMPOSITE BOX GIRDER BRIDGES</b>					<b>9</b>
Introduction to box girder bridges - behaviour of box girder bridges subjected to shear torsion and distortion-Design concepts. Case Studies					
<b>MODULE 5: GENERAL</b>					<b>9</b>
Introduction to steel concrete sandwich construction – Case Studies Seismic behavior of composite structures – case studies on steel-concrete composite construction in buildings.					
<i>On completion of the course, the students have to submit a term project report.</i>

COURSE CODE	CEA4706	COURSE CATEGORY	PC	L-T-P	3-0-0
CIA	50%			ESE	50%
LEARNING LEVEL	BTL 3				
CO	COURSE OUTCOMES			PO	
Students will be able to					
1.	Identify methods of materials classification and norms of selection and purchasing methods.			1, 2, 3, 7, 9	
2.	Describe principles of material procurement, management and disposal			1, 2, 3, 7, 9	
3.	Implement quality systems and standards in the preparation of documents and be aware of the different aspects of cost of quality.			1, 2, 3, 7, 9, 10	
4.	Apply relevant codes and standards, codes of quality, quality policy, methods in construction industry to attain customer satisfaction in projects			2, 3, 5, 7, 9	
5.	Identify and solve problems relating to quality improvement on the way and able to take early decisions to achieve the ultimate aim of the organization.			2, 3, 5, 7, 9, 10	
<b>Prerequisites : Nil</b>					
<b>MODULE 1 : MATERIAL CLASSIFICATION AND PROCUREMENT</b>					<b>(9)</b>
Material Classification –conventional and modern approaches to organizing materials management, Materials identification – classifying of materials – codification of materials – standardization – simplification and variety reduction of materials. Material Purchasing– Norms Of Vendor Rating – CEI Methodology – Material Selection And Development – Purchasing Procedures And Methods – Insurance Of Materials.					
<b>MODULE 2 : MATERIAL STORAGE AND SUPPLY</b>					<b>(9)</b>
Storing of Materials – methods of storing – safety and security of materials – store equipment – materials handling equipment – factors affecting materials handling. Supply Management – Sources of Supply – Out Sourcing Material Management - Procurement Planning - Functions of Material Management - Inventory Control. Management of surplus, obsolete and scrap materials – reasons for accumulation – methods of disposal – regulations and procedures.					
<b>MODULE 3: QUALITY MANAGEMENT &amp; SYSTEMS</b>					<b>(9)</b>
Definition of quality - Quality system standard- ISO family of standards and structure Requirement- Preparing quality systems Documents- Quality related training - Quality circles and Improvement Teams- Construction Team- Owner, engineers, Architect, Contractors. Inspection procedures for construction processes and products - Total QA/QC Programme- Cost of Quality - Implementing Quality system- Third party certification. Quality Policy, Objectives and methods in construction Industry - Factors influencing construction Quality -					
<b>MODULE 4: QUALITY ASSURANCE AND CONTROL</b>					<b>(9)</b>
Definitions and Objectives - Techniques and needs of QA/QC- Regulatory agent, Contract and Construction oriented objectives and methods- Technical Control and Financial Control - Different aspects of quality – Appraisals – organizing for quality and safety, Quality control by statistical methods, statistical quality control with sampling by attributes and variables – Quality control register, Quality control for concrete durability – Prescriptive specification.					

<b>MODULE 5: QUALITY IMPROVEMENT (9)</b>	
Selection of Construction materials -Influence of drawings, detailing, work and material specifications – IS codes, Standardization-Bid preparation-Construction activity-Environmental safety, Social and Environmental factors -Natural causes and speed of construction- Life cycle costing- Value Engineering and value analysis.	
<i>On completion of the course, the students have to submit a term project report.</i>

COURSE TITLE		MAINTENANCE AND REHABILITATION OF STRUCTURES		CREDITS	3
COURSE CODE	CEA4721	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA	50%			ESE	50%
LEARNING LEVEL	BTL 2				
CO	COURSE OUTCOMES			PO	
Students will be able to					
1.	Analyze the influence of different environmental elements, fire and pollution on buildings.			1,2,4,7	
2.	Describe various phases of maintenance and be able to evaluate damaged structures			1,2,3,4	
3.	Identify and describe material used in repair work			1,2,4,9	
4.	Describe various procedures and techniques in repair and rehabilitation			1,2,3,5,9	
5.	Explain strengthening measures and demolition techniques for existing buildings			1,2,3,5,9	
<b>Prerequisites : Nil</b>					
<b>MODULE1:DURABILITY</b>					<b>9</b>
Life Expectancy of Different Types of Buildings –Influence of Environmental Elements Such as Heat, Moisture, Precipitation and Frost on Buildings- Design and Construction Errors, Corrosion Mechanism- Effect of Biological Agents like fungus, moss, plants, trees, algae, - Termite Control and Prevention - Chemical Attack on Building Materials and Components- Aspects of Fire and Fire Prevention on Buildings- Impact of Pollution on Buildings.					
<b>MODULE 2: PHASES OF MAINTENANCE</b>					<b>9</b>
Energy and resource Conservation-Design of green Buildings-Evaluation tools for building energy-Embodied and operating energy-Peak demand-Comfort and indoor air quality-Visual and acoustical quality-Land, water and materials-Airborne emissions and Waste management.					
<b>MODULE 3: TECHNIQUES FOR REPAIR</b>					<b>9</b>
Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete. Rust eliminators and polymers coating for rebars during repair foamed concrete, mortar and dry pack, vacuum concrete.					
<b>MODULE 4: TECHNIQUES FOR REPAIR</b>					<b>9</b>
Techniques for Repair- Surface repair – material selection – surface preparation - rust eliminators and polymers coating for rebars during repair – repair of cracks in concrete and masonry-methods of repair - mortar repair for cracks -waterproofing of concrete roofs. Guniting and Shotcrete, Epoxy injection, shoring and underpinning. Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering wear, fire, leakage, marine exposure.					

Strengthening Measures- Flexural Strengthening, Beam Shear Capacity Strengthening, Column Strengthening, Shoring, Under Pinning and Jacketing Demolition Of Buildings– Introduction – Planning, Precautions And Protective Measures In Demolition Work-Sequence Of Operations- Demolition Of Structural Elements. Engineered Demolition techniques for dilapidated structures - Case studies.

COURSE TITLE		GREEN BUILDINGS & SUSTAINABLE CONSTRUCTION		CREDITS	3
COURSE CODE	CEA4722	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA	50%			ESE	50%
LEARNING LEVEL	BTL 2				
CO	COURSE OUTCOMES				PO
Students will be able to					
1.	Assess the environmental and socio-economic impacts of various mega projects.				1,2,3,5,9,10
2.	Describe the laws governing energy, conservation and climate change.				1,4,9
3.	Explain principles of sustainability, energy audits and water conservation				1,3,5,7,9
4.	Identify green building materials and their building codes.				1,3,4,7,9,
5.	Identify Energy efficient projects and be aware of the various methods financing them.				1,7,9
<b>Prerequisites: Nil</b>					
<b>MODULE 1: ENVIRONMENT AND ITS IMPACT</b>					<b>(9)</b>
Concept of environmental and environmental impact factors- area of consideration for mega projects such as airports, highways, power projects, water related projects, 3E's Environmental economics, ethics and ecology of sustainable development. Natural/physical environmental impacts-social impacts, economic impacts – concept of significance effect, commitments of resources. Physical, social, aesthetic and economic environment, type, outline of basic steps in performing the socio economic assessment, fiscal impacts analysis.					
<b>MODULE 2: POLLUTION AND CLIMATE CONTROL</b>					<b>(9)</b>
Rules and regulations & Laws governing Energy, Conservation in India & developed Nations – Energy Conservation Act 2001, Revisions and present state of implementation standardization & Labeling, Electricity Act 2003, Revisions and present status of implementation. United Nations Framework Convention on Climate change(UNFCCC), Protocol, Conference of Parties(COP), Clean Development Mechanism(CDM), Prototype Carbon Funds(PEF), Carbon credits and its trading, Benefits to developing countries.					
<b>MODULE 3: PRINCIPLES OF SUSTAINABILITY AND CONSERVATION OF RESOURCES</b>					<b>(9)</b>
Introduction to Sustainability, Major Environmental Challenges, Global Warming, Sustainable Urban Development. Building energy system strategies, Energy Conservation in Buildings, HVAC Systems, Energy and Atmosphere - LEED Credits, eQuest Energy Simulations, Conducting an Energy Audit, Fossil Fuels vs. Renewable Energy. Water Conservation in Buildings, Storm Water Harvesting and Management, Water cycle strategies.					
<b>MODULE 4: GREEN MATERIAL AND GREEN BUILDING CODES</b>					<b>(9)</b>
Introduction to Green Buildings; LEED, Green Construction Materials, Materials and Resources, Building Deconstruction, C&D Recycling, Indoor Environmental Quality – Basic, IEQ - LEED Credits, Building Commissioning, Materials selection strategies, Green building codes and standards, International Green Construction Code, Carbon accounting, Green Building Specifications.					
<b>MODULE 5: FINANCING OF ENERGY EFFICIENCY PROJECTS</b>					<b>(9)</b>
Energy efficient Projects, Evaluation of energy efficient projects, Various ways of financing Energy efficient projects, Role of Financial Institutions and corporate banks, Deferred Payment					

Financing. Types of energy Performance Contracts, Energy Services Companies (ESCOs), and their role, Emphasis on ESCOs.

COURSE TITLE		NUMERICAL METHODS APPLIED TO CIVIL ENGINEERING		CREDITS	3	
COURSE CODE		CEA4725	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL 3				
CO	COURSE OUTCOMES				PO	
Students will be able to						
1	Estimate the errors and assess the accuracy of numerical solutions and also apply the method of direct solution of linear equations.				2,3,5,9	
2	Find out the direct solution of non-linear systems.				2,3,5,9	
3	Solve partial differential equations				2,3,5,9	
4	Solve typical initial and boundary value problems.				2,3,5,9	
5	Solve numerical integration of time dependent partial differential equations				2,3,5,9	
<b>Prerequisites:</b> Nil						
<b>MODULE 1: INTRODUCTION TO NUMERICAL METHODS AND DIRECT SOLUTION OF LINEAR SYSTEMS (9)</b>						
Sources of error in numerical solutions: truncation error, round off error. Order of accuracy - Taylor series expansion. Direct solution of linear systems- Gauss elimination, Gauss Jordan elimination - Pivoting, inaccuracies due to pivoting. Factorization, Cholesky decomposition -Diagonal dominance - Banded matrices, storage schemes for banded matrices, skyline solver. Iterative solution of Linear systems-Jacobi iteration-Gauss Seidel iteration-Convergence criteria.						
<b>MODULE 2: DIRECT SOLUTION OF NON-LINEAR SYSTEMS (9)</b>						
Newton Raphson iterations to find roots of a 1D nonlinear equation - Generalization to multiple dimensions-Newton Iterations, Quasi Newton iterations-Local and global minimum, rates of convergence, convergence criteria. Iterative Solution of Non Linear systems- Conjugate gradient-Preconditioning.						
<b>MODULE 3: PARTIAL DIFFERENTIAL EQUATIONS (9)</b>						
Introduction to partial differential equations - Definitions & classifications of first and second order equations - Examples of analytical solutions-Method of characteristics. Introduction to the Finite Element Method as a method to solve partial differential equations- Strong form of the differential equation-Weak form-Galerkin method: the finite element approximation-Interpolation functions: smoothness, continuity, completeness, Lagrange polynomials.						
<b>MODULE 4: NUMERICAL DIFFERENTIATION (9)</b>						
Difference operators (forward, backward and central difference)-Stability and accuracy of solutions-Application of finite difference operators to solve initial and boundary value problems-Numerical quadrature: Trapezoidal rule, Simpson's rule, Gauss quadrature.						
<b>MODULE 5: NUMERICAL INTEGRATION OF TIME DEPENDENT PARTIAL DIFFERENTIAL EQUATIONS (9)</b>						

Numerical solutions - Newmark's  $\beta$  method-Wilson  $\theta$  method-Numerical solutions for integral equations- Applications to linear and non-linear problems

COURSE CODE		CEA4726	COURSE CATEGORY	ELE	L-T-P	3 -0-0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL3				
CO	COURSE OUTCOMES				PO	
The Students will be able to						
1	Solve the problems on wind load analysis				1,2,3,5,9,11	
2	Design Connections for Beam-Columns				1,2,3,5,9,11	
3	Design flexural and compression members using Light gauge steel sections				1,2,3,5,9,11	
4	Design steel chimneys and its foundation				1,2,3,5,9,11	
5	Analyse and Design Industrial Buildings.				1,2,3,5,9,11	
<b>Prerequisites : Nil</b>						
<b>MODULE 1: STABILITY, PLATE BUCKLING AND FATIGUE</b>					<b>(9)</b>	
Classification of structures-wind load analysis. Types of fatigue leading and failure- Fatigue test, endurance limit- S-N diagram- Various failure relations- Factors influencing fatigue strength- Influence of stress concentration on fatigue test						
<b>MODULE 2: BEAM- COLUMN CONNECTIONS/SEMI RIGID CONNECTIONS</b>					<b>(9)</b>	
Throat and Root Stresses in Fillet Welds – Seated Connections Unstiffened and Stiffened seated Connections – Moment Resistant Connections – Clip angle Connections – Split beam Connections – Framed Connections						
<b>MODULE 3: DESIGN OF LIGHT GAUGE STEEL STRUCTURES</b>					<b>(9)</b>	
Types of cross sections - Local buckling and lateral buckling - Design of compression and tension members - Beams - Deflection of beams- Cold formed steel structures-Pre-engineered metal buildings- long span structures.						
<b>MODULE 4: DESIGN OF CHIMNEYS</b>					<b>(9)</b>	
Design of self-supporting chimney – Guyed Chimney – foundation design						
<b>MODULE 5: ANALYSIS AND DESIGN OF INDUSTRIAL BUILDINGS</b>					<b>(9)</b>	
Review of loads on structures-Dead, Live, wind and Seismic loads as per National standard – Design of Purlins, louver rails, gable column and Gable wind girder-Analysis and design of Gable frames.						
<b>On completion of the course, students have to submit a term project report.</b>

<b>The Students will be able to</b>					
1	Describe the properties of cement and its ingredients				1,2,3,4,5,6,7,12,PSO 2
2	Use appropriate admixtures in constructions				1,2,3,4,5,6,7,12,PSO 2
3	Describe the properties of aggregates				1,2,3,4,5,6,7,12,PSO 2
4	Carry out mix design for concrete				1,2,3,4,5,6,7,12,PSO 2
<b>Prerequisites : Construction Materials</b>					
<b>MODULE 1: CEMENT</b>					<b>(9)</b>
Composition of OPC-Manufacture-Modified Portland cements-Hydration process of Portland cements-Structure of Hydrated cement Pastes					
<b>MODULE 2: ADMIXTURES</b>					<b>(9)</b>
Mineral admixtures-Slags-Pozolanas and Fillers-Chemical Admixtures-Solutes Retarders-Air Entraining Agents-Water proofing compounds-Plasticizers and Super Plasticizers					
<b>MODULE 3: AGGREGATES</b>					<b>(9)</b>
Shape and Mechanical properties-Absorption and Physical durability-Chemical stability and packing Characteristics					
<b>MODULE 4: FRESH CONCRETE</b>					<b>(9)</b>
Mix proportioning-IS and ACI codal methods-Workability-Test -Mixes incorporating Fly-Ash Mixes for High performance concrete-Fibre reinforced concrete					
<b>MODULE 5: PROPERTIES AND DURABILITY OF CONCRETE</b>					<b>(9)</b>
Interfacial Transition zone-Fracture strength-Mechanical properties-High strength concrete-Shrinkage-Creep- Other properties. Basic consideration-Stability of constituents-Chemical Attack-Corrosion of Reinforcing steel.

COURSE TITLE		SMART MATERIALS AND NEW TECHNOLOGIES		CREDITS	3	
COURSE CODE		CEA4728	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%			ESE	50%
LEARNING LEVEL		BTL 2				
CO	COURSE OUTCOMES				PO	
Students will be able to						
1.	Characterize and classify traditional and advanced materials and systems.				1,2,9	
2.	Identify different types of smart materials and be able to differentiate between their properties				1,2,3,9	
3.	Interpret control systems in intelligent environments and learn surroundings and environment control.				1,2,3,4,10	
4.	Apply the developments in concrete and metals in construction projects.				1,5,7,9	
5.	Explain applications of construction materials like glass, polymers, paints etc. in building construction.				1,3,9	
<b>Prerequisites : Nil</b>						
<b>MODULE 1: CHARACTERIZATION OF MATERIALS</b>					<b>(9)</b>	
Internal structure, properties and general classes of materials, classification systems for conventional and smart materials, characteristics of smart materials and systems.						
<b>MODULE 2: TYPES OF SMART MATERIALS</b>					<b>(9)</b>	
Types of smart materials- property changing and energy exchanging materials-chromics, smart conductors and piezoelectrics, electrorheological fluids, light emitting materials, shape memory alloys.						
<b>MODULE 3: CONTROL SYSTEMS, AUTOMATION AND INTELLIGENT STRUCTURES</b>					<b>(9)</b>	
Sensors, detectors, transducers and actuators - control systems – mems – sensor networks. Homes of the future – characterization of intelligent environments – complex environments.						
<b>MODULE 4: DEVELOPMENTS IN CONCRETES AND METALS</b>					<b>(9)</b>	
Special concretes – green cements, self-healing concrete, fibre reinforced concrete –polymer concrete composites – geopolymers concrete. Metals – steel, aluminum, metal alloys.						
<b>MODULE 5: GLASS AND OTHER MATERIALS</b>					<b>(9)</b>	
Various basic glass types, decoration on glass, other specialty glass, applications, glass fiber reinforced plastics, polymers – classification and uses – special paints – types and its application in construction, geosynthetics, nanomaterials.

COURSE TITLE		ENERGY CONSERVATION TECHNIQUES IN BUILDING CONSTRUCTION		CREDITS	3	
COURSE CODE		CEA4729	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL 2				
CO	COURSE OUTCOMES			PO		
Students will be able to						
1.	Describe energy usage in buildings, and energy production systems.			1,4,5,7,9		
2.	Design green buildings with respect to comfort and waste management methods.			1,4,5,7,9		
3.	Identify energy efficient design strategies and advanced building technology			1,4,5,7,9		
4.	Analyze energy efficiency in buildings and describe various conservative measures			1,4,5,7,9		
5.	Explain energy savings system and energy management			1,4,5,7,9		
<b>Prerequisites:</b> Nil						
<b>MODULE 1: FUNDAMENTALS OF ENERGY</b>					<b>(9)</b>	
Fundamentals of Energy-Energy production Systems-Heating, Ventilating and Air conditioning-Solar Energy and conservation-Energy Economic Analysis-Energy conservation and audits-Domestic energy consumption-Savings-Challenges-Primary energy use in buildings-Residential-commercial-Institutional and public buildings.						
<b>MODULE 2: ENERGY AND RESOURCE CONSERVATION</b>					<b>(9)</b>	
Energy and resource Conservation-Design of green Buildings-Evaluation tools for building energy-Embodied and operating energy-Peak demand-Comfort and indoor air quality-Visual and acoustical quality-Land, water and materials-Airborne emissions and Waste management.						
<b>MODULE 3: DESIGN CONSIDERATION</b>					<b>(9)</b>	
Natural building design consideration-Energy efficient design strategies-Contextual factors-Longevity and process assessment-Renewable energy sources and design-Advanced building technologies-Smart buildings-Economies and cost analysis.						
<b>MODULE 4: ENERGY IN BUILDING DESIGN</b>					<b>(9)</b>	
Energy in building design-Energy efficient and environmental friendly building-Thermal phenomena-Thermal comfort-Indoor air quality-Climate, Sun and solar radiation-Psychometrics-Passive heating and cooling systems- Energy analysis -Active HVAC systems-Preliminary investigations-Goals and policies-Energy audit-Types of Energy audit-Analysis of results-Energy flow diagram-Energy consumption/Unit production-Identification of wastage-Priority of conservative measures-Maintenance of energy management program.						

**MODULE 5: ENERGY MANAGEMENT****(9)**

Energy management of electrical equipment-Improvement of power factor-Management of maximum demand-Energy savings in pumps-Fans-Compressed air systems-Energy savings in lighting systems-Air conditioning systems-Applications-Facility operation and maintenance-Facility modifications-Energy recovery dehumidifier-Waster heat recovery-Steam plants and distribution systems-Improvement of boiler efficiency-Frequency of blow down-Steam leakage-Steam flash and condense return.

CIA		50%		ESE	50%	
LEARNING LEVEL		BTL 2				
CO	COURSE OUTCOMES				PO	
<b>Students will be able to</b>						
1.	Understand manpower planning, organizing, controlling in human resource management.				1, 2,6,9,10	
2.	Apply knowledge of organization in staffing, planning, operations, development, placement and training.				1, 5,6,7, 9	
3.	Apply principles of basic psychology and human behaviour in leadership, management and organization of people				1,2,8,9,10	
4.	Implement safety and health practices in addition to laws related to insurance and welfare measures.				1,7,9,10	
5.	Apply management and development methods in managing special human resource problems, employee appraisal and assessment in the construction industry.				1,7,9,10	
<b>Prerequisites:</b> Nil						
<b>MODULE 1: MANPOWER PLANNING</b>					<b>(9)</b>	
Manpower Planning, Organizing, Staffing, directing and Controlling-Personnel Principles.						
<b>MODULE 2: ORGANISATION</b>					<b>(9)</b>	
Organization-Span of control-Organization charts-Staffing plan-Development and Operation of Human resources -Managerial Staffing-Recruitment-Selection-Placement, Training and Development.						
<b>MODULE 3: HUMAN BEHAVIOUR</b>					<b>(9)</b>	
Introduction to the field of management-basic individual psychology-motivation-job design and performance management-Managing groups at work-self managing work teams-Inter group behaviour and conflict in organizations-Leadership- Behavioural aspects of decision-making; and communication for people management.						
<b>MODULE 4: WELFARE MEASURES</b>					<b>(9)</b>	
Compensation - Safety and Health- GPF- EPF- Group- Insurance- Housing- Pension- Laws-related to welfare measures.						
<b>MODULE 5: MANAGEMENT AND DEVELOPMENT METHODS</b>					<b>(9)</b>	
Compensation-Wages and Salary, Employee Benefits ,employee appraisal and assessment-Employee services-Safety and Health-Discipline and Discharge-Special human resource problems, Performance appraisal-Employee hand book and personnel manual-Job descriptions and organization structure and Human relations-Productivity of Human resources.

COURSE TITLE		SHORING, SCAFFOLDING AND FORMWORK		CREDITS	3
COURSE CODE	CEA4731	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA	50%			ESE	50%
LEARNING LEVEL	BTL 2				
CO	COURSE OUTCOMES			PO	
Students will be able to					
1.	Understand and execute the economical form work construction.			1,2,3,7,9	
2.	Identify various materials and equipment involved in form work construction.			1,4,7,9,	
3.	Identify and execute shore and scaffolds safety practices.			1,3,5,6,7,9	
4.	Describe the basic concept of formwork design in construction			1,3,5,7,9,10	
5.	Identify and appreciate the different systems of formwork and safety factors.			1,2,3,4,7,9,10	
<b>Prerequisites:</b> Nil					
<b>MODULE 1: FORMWORK AND OVER-ALL PLANNING</b>					<b>(9)</b>
General-Requirement of formwork-Types of forms-Concrete form work-Formwork specification, Finishes, Tolerances-Development of a basic system-Planning for maximum reuse-Economical form construction-Other cost affected by formwork plan-Planning examples-trial plan, crane size, efficient scheduling, planning form sizes cost estimate, pier strut forming, scheduling, recheck plan details-Detailing the forms.					
<b>MODULE 2: MATERIALS AND EQUIPMENT</b>					<b>(9)</b>
Permissible stress, Materials as form facing-Timber and wood – based materials-Woos –based face contact materials-Plywood and other sheet materials- Structural properties of sheet materials, design factors-Metals-Plastic, Rubber and fabrics-Cement based materials-Proprietary equipment Permanent formwork-Form ties-Reinforcement spacer systems-Surface treatments-Ancillary materials and items-Form liners.					
<b>MODULE 3: SHORES, SLIPFORMS AND SCAFFOLDS</b>					<b>(9)</b>
Simple wood stresses-Slenderness ratio-Allowable load-Tubular steel shores patented shores-Site preparation, Size and spacing-Steel Tower Frames-Safety practices-Horizontal shores shoring for multi stories-More concentrated shore loads T-heads-Tow Tier Wood shores-Ellis Shores-Dayton sure grip and baker Ross shores-Safeway Symons shores-Beaver-advanced shores dead shore-Raking and Flying shores. Principles-Types-Advantages-Functions of Various components-Planning-Desirable Characteristics of concrete-common problems faced-Safety in slip forms special structures built with slip form technique-Codal provisions- Types of Scaffolds-Putlog and independent Scaffold-Single pole scaffolds-Fixing ties-Spacing of ties plan-Bracing-Knots-Safety net-General safety requirements-precautions against particular hazards-Truss suspended-Gantry and system scaffolds.					
<b>MODULE 4: FORMWORK DESIGN</b>					<b>(9)</b>
Preamble to design, loadings – Self weight of formwork, imposed loads, concrete pressure on formwork. Design – General design considerations – basic simplification – wall, slab and beam form design – allowable stresses – check for deflection, bending and lateral stability – examples – formwork drawing and calculations.					

**MODULE 5: DIFFERENT SYSTEMS OF FORMWORK AND SAFETY REQUIREMENTS (9)**

Formwork Systems – Form wall footing – column footings – slab on grade and paving work – highway airport paving – external vibration – prefabricated panel systems – giant forms – curved wall forms – erection practices – column head or girder form – suspended form – concrete joint construction – flying system of forms – shell form – tunnel forming components – curb and gutter forms – invert forms – arch forms – concrete placement methods – causes of failures – case studies – finish of exposed concrete – design deficiencies – safety factors – stripping sequence – re shoring installation – advantages of re shoring – ACI – permitted and graduated irregularities.

COURSE TITLE		INDUSTRIAL STRUCTURES		CREDITS	3	
COURSE CODE		CEA4732	COURSE CATEGORY	ELE	L-T-P	3 -0- 0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL3				
CO	COURSE OUTCOMES				PO	
The Students will be able to						
1	Implement the Factories Act in planning the industrial buildings.				1,2,3,9,10	
2	Design suitable roofing for industrial buildings.				1,2,3,9,10,11	
3	Design various components of power plant structures.				1,2,3,9,10,11	
4	Design transmission Line towers.				1,2,3,9,10,11	
5	Design gantry girders and plate girders				1,2,3,9,10,11	
<b>Prerequisites: Nil</b>						
<b>MODULE 1: PLANNING AND FUNCTIONAL REQUIREMENTS</b>					<b>(9)</b>	
Classification of Industries and Industrial structures - planning for Layout Requirements regarding Lighting, Ventilation and Fire Safety - Protection against noise and vibration - Guidelines from Factories Act.						
<b>MODULE 2: INDUSTRIAL BUILDINGS</b>					<b>(9)</b>	
Roofs for Industrial Buildings - Steel and RC - Folded Plates and Shell Roofs - Design of Corbels and Nib -Machine Foundations.						
<b>MODULE 3: POWER PLANT STRUCTURES</b>					<b>(9)</b>	
Bunkers and Silos - Chimney and Cooling Towers - Design of Steel storage tanks – Nuclear containment structures.						
<b>MODULE 4:POWER TRANSMISSION STRUCTURES</b>					<b>(9)</b>	
Cables - Transmission Line Towers - Substation structures - Tower foundations - Testing towers.						
<b>MODULE 5: GIRDERS</b>					<b>(9)</b>	
Gantry Girders – Plate Girders- Stiffeners.						
<b>On completion of the course, the students have to submit a term project report.</b>

<b>LEARNING LEVEL</b>	<b>BTL-3</b>				
<b>CO</b>	<b>COURSE OUTCOMES</b>				<b>PO</b>
The student will be able to:					
1	Explain the general design considerations for the construction of bridges				1,2,3,9,10
2	Design reinforced concrete tee beam and slab bridges for various IRC Loading.				1,2,3,5,9,10
3	Describe the design principles of various long span girders.				1,2,3,9,10
4	Design the pre-stressed concrete bridges.				1,2,3,5,9,10
5	Design plate girder bridges.				1,2,3,5,9,10
<b>Prerequisites : Nil</b>					
<b>MODULE 1: INTRODUCTION</b>					<b>(9)</b>
Classification, investigations and planning, choice of type, I.R.C.specifications for road bridges, standard live loads, other forces acting on bridges, general design considerations.					
<b>MODULE 2: SHORT SPAN BRIDGES</b>					<b>(9)</b>
Load distribution theories, analysis and design of slab culverts, T beam and slab bridges. Design of panel and cantilever for IRC loading.					
<b>MODULE 3: LONG SPAN GIRDER BRIDGES</b>					<b>(9)</b>
Design principles of continuous bridges, box girder bridges, balanced cantilever bridges - Bearings, Footings, Drilled shaft foundations and Caissons for bridges.					
<b>MODULE 4: DESIGN OF PRESTRESSED CONCRETE BRIDGES</b>					<b>(9)</b>
Design of prestressed concrete bridges - Preliminary dimensions - Flexural and torsional parameters - Courbon's theory - Distribution coefficient by exact analysis - Design of girder section - Maximum and minimum prestressing forces - Eccentricity - Live load and dead load shear forces - cable zone in girder - Check for stresses at various sections - Check for diagonal tension - Diaphragms - End block - Short term and long term deflection.					
<b>MODULE 5: DESIGN OF PLATE GIRDER BRIDGES</b>					<b>(9)</b>
Design of plate girder railway bridges for railway loading - - Wind effects - Design of web and flange plates - Vertical and horizontal stiffeners.					
On completion of the course, the students have to submit a term project report.

COURSE TITLE		STABILITY OF STRUCTURES			CREDITS	3
COURSE CODE		CEA4734	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%			ESE	50%
LEARNING LEVEL		BTL 3				
CO	COURSE OUTCOMES					PO
Students will be able to						
1	Describe the stability of columns and the buckling modes.					3,10
2	Execute inelastic analysis of columns					1,2,3,5,9,10, 11
3	Evaluate the buckling of beam-columns, portal frames and stability of multi-storeyed frames.					1,2,3,5,9,10, 11
4	Evaluate the lateral buckling of beams, torsional buckling and flexural torsional buckling.					1,2,3,5,9,10, 11
5	Apply the concept of buckling of thin isotropic rectangular plates.					1,2,3,5,9,10
<b>Prerequisites:</b> Nil						
<b>MODULE 1: STABILITY OF COLUMNS</b>						<b>(9)</b>
Concepts of Elastic Structural stability- Analytical approaches to stability - characteristics of stability analysis- Elastic Buckling of columns- Equilibrium; Energy and Imperfection approaches - Non-prismatic columns- Built up columns- orthogonality of buckling modes- Effect of shear on buckling load - Large deflection theory.						
<b>MODULE 2: METHODS OF ANALYSIS AND INELASTIC BUCKLING</b>						<b>(9)</b>
Approximate methods - Rayleigh and Galerkin methods - numerical methods - Finite difference and finite Element - analysis of columns - Experimental study of column behaviour - South well plot - Column curves - Derivation of Column design formula - Effective length of Columns - Inelastic behaviour-Tangent modulus and Double modulus Theory						
<b>MODULE 3: BEAM COLUMNS AND FRAMES</b>						<b>(9)</b>
Beam column behaviour- standard cases- Continuous columns and beam columns - Column on elastic foundation - Buckling of frames - Single storey portal frames with and without side sway - Classical and stiffness methods - Approximate evaluation of critical loads in multi-storied frames - Use of Wood's charts.						
<b>MODULE 4: BUCKLING OF BEAMS</b>						<b>(9)</b>
Lateral buckling of beams - Energy method- Application to Symmetric and simply symmetric I beams- simply supported and Cantilever beams - Narrow rectangular cross sections- - Numerical solutions - Torsional buckling - Uniform and non-uniform Torsion on open cross section – Flexural torsional buckling - Equilibrium and energy approach.						
<b>MODULE 5: BUCKLING OF THIN PLATES</b>						<b>(9)</b>
Isotropic rectangular plates - Governing Differential equations - Simply Supported on all edges -Use of Energy methods - Plates with stiffeners - Numerical Techniques.

COURSE TITLE		DESIGN OF TALL STRUCTURES			CREDITS	3	
COURSE CODE		CEA4735	COURSE CATEGORY		ELE	L-T-P	3-0-0
CIA		50%			ESE	50%	
LEARNING LEVEL		BTL 3					
CO	COURSE OUTCOMES					PO	
The Students will be able to							
1	Describe the various structural systems used in the construction of Tall structures.					1,2,3,9,10	
2	Analyze tall structures using computer-based methods and approximate methods.					1,2,3,9,10,11	
3	Describe various types of systems for structural systems.					1,2,3,9,10	
4	Model and analyse framed and shear wall structures					1,2,3,9,10,11	
5	Execute non-linear analysis of Tall Structures.					1,2,3,9,10,11	
<b>Prerequisites: Nil</b>							
<b>MODULE 1: DESIGN CRITERIA</b>						<b>(9)</b>	
Design Philosophy, Materials - Modern concepts - High Performance Concrete, Fibre Reinforced Concrete, Light weight concrete, Self-Compacting Concrete							
<b>MODULE 2: LOADING</b>						<b>(9)</b>	
Gravity Loading - Dead load, Live load, Impact load, Construction load, Sequential loading. Wind Loading - Static and Dynamic Approach, Analytical method, Wind Tunnel Experimental methods. Earthquake Loading - Equivalent lateral Load analysis, Response Spectrum Method, Combination of Loads.							
<b>MODULE 3: BEHAVIOUR OF STRUCTURAL SYSTEMS</b>						<b>(9)</b>	
Factors affecting the growth, height and structural form, Behaviour of Braced frames, Rigid Frames, In filled frames, Shear walls, Coupled Shear walls, Wall - Frames, Tubular, Outrigger braced, Hybrid systems.							
<b>MODULE 4: ANALYSIS AND DESIGN</b>						<b>(9)</b>	
Modelling for approximate analysis, Accurate analysis and reduction techniques, Analysis of structures as an integral unit, Analysis for member forces, drift and twist. Computerized 3D analysis. Design for differential movement, Creep and Shrinkage effects, Temperature Effects and Fire Resistance.							
<b>MODULE 5: STABILITY ANALYSIS</b>						<b>(9)</b>	
Overall buckling analysis of frames, wall - frames, Approximate methods, Second order effect of gravity loading, P-Delta Effects, Simultaneous first order and P-Delta analysis, Translational instability, Torsional Instability, Out of plumb effects, Effect of stiffness of members and foundation rotation in stability of structures.

COURSE TITLE		OPTIMIZATION IN STRUCTURAL DESIGN		CREDITS	3	
COURSE CODE		CEA4736	COURSE CATEGORY	ELE	L-T-P	3 -0- 0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL3				
CO	COURSE OUTCOMES				PO	
The Students will be able to						
1	Acquire information about concepts like minimum weight, minimum cost design, Objective function, constraints, classical methods.				1	
2	Get acquainted with Linear programming, Integer Programming, Quadratic Programming, Dynamic Programming and Geometric Programming methods for Optimal design of structural elements.				2	
3	Attain proficiency on Linear Programming methods for plastic design of frames, Computer search methods for univariate and multivariate Minimization.				3	
4	Do optimization by structural theorems, Maxwell, Mitchell and Heyman's Theorems for trusses and frames, fully stresses design with deflection constraints, optimality criterion methods.				4	
5	Utilise optimization methods for optimal design of structural components.				5	
<b>Prerequisites: Nil</b>						
<b>MODULE 1: INTRODUCTION</b>					<b>(6)</b>	
Basic concepts of minimum weight, minimum cost design, Objective function, constraints, classical methods						
<b>MODULE 2: OPTIMIZATION TECHNIQUES AND ALGORITHMS</b>					<b>(10)</b>	
Linear programming, Integer Programming, Quadratic Programming, Dynamic Programming and Geometric Programming methods for Optimal design of structural elements.						
<b>MODULE 3: COMPUTER SEARCH METHODS</b>					<b>(10)</b>	
Linear Programming methods for plastic design of frames, Computer search methods for univariate and multivariate Minimization.						
<b>MODULE 4: OPTIMIZATION THEOREMS</b>					<b>(9)</b>	
Optimization by structural theorems, Maxwell, Mitchell and Heyman's Theorems for trusses and frames, fully stresses design with deflection constraints, optimality criterion methods.						
<b>MODULE 5: STRUCTURAL APPLICATIONS</b>					<b>(10)</b>	
Optimal design of structural elements, continuous beams and single storied frames using plastic theory - Minimum weight design for truss members - Fully stressed design - Design of R.C. structures such as multi-storey buildings, water tanks, bridges, shell roofs using Optimisation techniques. Use of Software packages for optimization

The Students will be able to						
1	Describe wave generation process and theories.				3,10	
2	Apply concepts of forces in offshore structures and offshore soil and structure modelling.				1,2,3,10	
3	Model and analyse offshore structures				1,2,3,5,6,10,11	
4	Analyze foundations for offshore structures				1,2,3,5,6,10,11	
5	Design different components of offshore structures.				1,2,3,6,10,11	
<b>Prerequisites: Nil</b>						
<b>MODULE 1: WAVE THEORIES</b>						<b>(9)</b>
Wave generation process, small, finite amplitude and nonlinear wave theories.						
<b>MODULE 2: FORCES OF OFFSHORE STRUCTURES</b>						<b>(9)</b>
Wind forces, wave forces on small bodies and large bodies - current forces - Morison equation.						
<b>MODULE 3: OFFSHORE SOIL AND STRUCTURAL MODELLING</b>						<b>(9)</b>
Different types of offshore structures, foundation modelling, fixed jacket platform structural modelling.						
<b>MODULE 4: ANALYSIS OF OFFSHORE STRUCTURES</b>						<b>(9)</b>
Static method of analysis, foundation analysis and dynamics of offshore structures.						
<b>MODULE 5: DESIGN OF OFFSHORE STRUCTURES</b>						<b>(9)</b>
Design of platforms, helipads, Jacket tower, analysis and design of mooring cables and pipelines.

CIA		50%		ESE	50%	
LEARNING LEVEL		BTL 3				
CO	COURSE OUTCOMES				PO	
Students will be able to						
1	Describe the systems and methods of prestressing and find the deflection of pre-stressed elements.				1,2,3,9,10	
2	Design the pre-stressed concrete elements for flexure as per the codal provisions.				1,2,3,9,10	
3	Design the pre-stressed concrete elements for shear, torsion and anchorage zone as per the codal provisions.				1,2,3,9,10	
4	Analyze statically indeterminate structures				1,2,3,5,9,10	
5	Design pre-stressed concrete tanks, poles and sleepers.				1,2,3,9,10	
<b>Prerequisites:</b> Nil						
<b>MODULE 1: PRINCIPLES AND ANALYSIS FOR FLEXURE</b>					<b>(9)</b>	
Principles of Prestressing - Types of prestressing systems - Materials - Systems and devices - Analysis and design for flexure- Behaviour of prestressed concrete elements - General concept of prestress - Force transmitted by pretensioned and post tensioned systems - losses in prestress - analysis for Ultimate strength - Comparison of codal provisions - at service load and Magnel's approach .						
<b>MODULE 2: DESIGN FOR FLEXURE</b>					<b>(9)</b>	
Concept of Limit State design - Limit state of Collapse and serviceability - Design using allowable stresses - Stress range approach - Lin's approach - Magnel's approach						
<b>MODULE 3: DESIGN FOR SHEAR, TORSION AND ANCHORAGE ZONE</b>					<b>(9)</b>	
Shear resistance in beams - Design for shear in rectangular and flanged beams – Behaviour under torsion -Modes of failure - Design for torsion, shear and bending Anchorage Zone - analysis and design of pretensioned and post tensioned end blocks - IS code provisions - Comparison of other codes.						
<b>MODULE 4: STATICALLY INDETERMINATE STRUCTURES</b>					<b>(9)</b>	
Analysis of indeterminate structures - Continuous beams - Concept of concordance and linear transformations - Single storied rigid frames - Choice of cable profiles.						
<b>MODULE 5: PRESTRESSED SPECIAL STRUCTURES</b>					<b>(9)</b>	
Concept of circular prestressing - Design of prestressed concrete pipes and cylindrical water tanks - Composite construction- types, behaviour, flexural stresses, longitudinal shear transfer, transverse shear - Compression members - Design of poles and piles - Partial pre stressing - Principles, analysis and design concepts.

COURSE TITLE		DISASTER MANAGEMENT		CREDITS	3	
COURSE CODE		CEA4739	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL 2				
CO	COURSE OUTCOMES			PO		
Students will be able to						
1.	Identify the nature and extent of disasters and describe phase I of the disaster management cycle			1,2,3,9		
2.	Describe and appreciate the different phases in the disaster management cycle including preparation, planning, response and recovery			1,7,8,9		
3.	Identify and implement emergency management programmes by various organizations and assess the various methods of the same.			1,2,7,9		
4.	Identify community based initiatives during disasters and describe the various aspects under them.			1,3,7,9		
5.	Plan for disasters and be aware of disaster response personnel and their duties.			1,3,7		
<b>Prerequisites : Nil</b>						
<b>MODULE 1: NATURE OF DISASTERS</b>					<b>(9)</b>	
Disasters – Natures and extent of disasters, natural calamities such as earthquake, floods, drought volcanoes, forest, coasts hazards, landslides etc. Manmade disasters such as chemical and industrial hazards, nuclear hazards, fire hazards etc. Disaster Management Cycle –Phase I: Mitigation, and strategies; hazard Identification and vulnerability analysis. Disaster Mitigation and Infrastructure, impact of disasters on development programs, vulnerabilities caused by development, developing a draft country-level disaster and development policy.						
<b>MODULE 2: DISASTER MANAGEMENT CYCLE</b>					<b>(9)</b>	
Phases-Disaster Management Cycle – Phase II: Preparedness, Disaster Risk Reduction(DRR), Emergency Operation Plan (EOP), Mainstreaming Child Protection and Gender in Emergency Planning, Assessment, Phases III and IV: Response and recovery, Response aims, Response Activities, Modern and traditional responses to disasters, Disaster Recovery, and Plan , Disasters as opportunities for development initiatives. Disaster Management – Financing relief expenditure, legal aspects, rescue operations. Casual management, risk management.						
<b>MODULE 3: EMERGENCY MANAGEMENT AND ORGANIZATIONS</b>					<b>(9)</b>	
Emergency Management program – Administrative setup and organization. Hazard analysis, training of personnel, information management, emergency facilities and equipment necessary public awareness creation, preparation and execution of the emergency management program. Various organizations registered with Government and NGO’s working for disaster relief- Challenges faced by organizations. Methods of assessment of impact of disasters such as photogrammetric methods, media survey, ground data collection.						
<b>MODULE 4: DISASTER COMMUNITY</b>					<b>(9)</b>	
Disaster Community-Community-based Initiatives in Disaster management, need for Community-Based Approach, categories of involved organizations: Government, Non-government organizations (NGOs), Regional And International Organizations, Panchayaths, Community Workers, National And Local Disaster Managers, Policy Makers, Grass-Roots						

Workers, Methods Of Dissemination Of Information, Community-Based Action Plan, Advantages/Disadvantages Of The Community-Based Approach.	
<b>MODULE 5: DISASTER PLANNING (9)</b>	
Disaster Planning-Disaster Response Personnel and duties, Community Mitigation Goals, Pre-Disaster Mitigation Plan, Personnel Training, Volunteer Assistance, School-based Programmes, Hazardous Materials, Ways of storing and safely handling hazardous materials, Coping with Exposure to Hazardous Materials. International adopted practices for disaster mitigation. Rules and regulations, Monitoring aspects of disaster mitigations programs.

COURSE TITLE	BUILDING ACOUSTICS AND NOISE CONTROL			CREDITS	3
COURSE CODE	CEA4740	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA	50%			ESE	50%
LEARNING LEVEL	BTL 2				
CO	COURSE OUTCOMES				PO
Students will be able to					
1.	Describe properties of sound waves and the characteristics of the human ear.				1,2,4,9
2.	Identify and select acoustic material for building construction based on their properties.				1,2,4,7,9
3.	Apply the principles of transmission of sound in its control and insulation.				1,2,4,7,9
4.	Identify and select apt insulation for different building components and machinery.				1,2,4,7,9
5.	Apply basic principles of acoustic design for different building applications.				1,2,4,7,9
<b>Prerequisites : Nil</b>					
<b>MODULE 1: INTRODUCTION</b>					<b>(9)</b>
Sound waves, Frequency, Intensity, Wave length, Measurement of sound, Decibel scale speech and music frequencies, human ear characteristics-Tone structure.					
<b>MODULE 2: PROPERTIES OF ACOUSTIC MATERIAL</b>					<b>(9)</b>
Outdoor noise levels - acceptable indoor noise levels-IS codes –sono meter, determinate of density of a given building material, absorption co-efficient and measurements, choice of absorption material, resonance, reverberation, echo, exercises involving reverberation time and absorption co-efficient.					
<b>MODULE 3: NOISE CONTROL</b>					<b>(9)</b>
Types of noises, transmission of noise, transmission loss, noise control and sound insulation, remedial measures and legislation					
<b>MODULE 4: INSULATION OF MACHINERY</b>					<b>(9)</b>
Walls/partitions, floors/ceilings, windows/doors, insulating fittings and gadgets machine mounting and insulation of machinery.					
<b>MODULE 5: BASIC PRINCIPLES IN ACOUSTICS DESIGN</b>					<b>(9)</b>
Site selection, shape, volume, treatment for interior surfaces-basic principles in designing open air theatres, cinemas, broadcasting studios, concert halls, class rooms, lecture halls and theatres for acoustics.

COURSE TITLE		BUILDING SERVICES		CREDITS	3
COURSE CODE	CEA4741	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA	50%			ESE	50%
LEARNING LEVEL	BTL 2				
CO	COURSE OUTCOMES			PO	
Students will be able to					
1.	Apply principles of structural integrity and building services engineering to building construction including intelligent buildings.			1,4,7,9	
2.	Apply general principles of water treatment, plumbing and sewage systems in buildings.			1,4,7,9	
3.	Identify and appreciate electrical wiring systems and apply the concepts of lighting and HVAC to building construction.			1,4,7,9	
4.	Identify and apply various fire safety measures.			1,4,7,9,10	
5.	Coordinate and manage the installation and maintenance of different service systems in a building.			1,4,7,9	
<b>Prerequisites : Nil</b>					
<b>MODULE 1: BUILDING SERVICES SYSTEMS</b>					<b>(9)</b>
Integrated design: factors affecting selection of services/systems, Provision of space in the building to accommodate building services, Structural integrity of building services equipment. Sound and vibration attenuation features, Provisions for safe operation and maintenance, Building services engineering system for intelligent buildings: Introduction to information transmission systems, communication and protection system, call systems, public address system and Building automation/management systems.					
<b>MODULE 2: WATER AND SEWAGE TREATMENT SYSTEMS</b>					<b>(9)</b>
Water quality, Purification and treatment- water supply systems-distribution systems in small towns –types of pipes used- laying jointing ,testing-testing for water tightness plumbing system for building-internal supply in buildings- municipal bye laws and regulations - Rain Water Harvesting - Sanitation in buildings-arrangement of sewerage systems in housing -pipe systems- storm water drainage from buildings -septic and sewage treatment plant – collection, conveyance and disposal of town refuse systems.					
<b>MODULE 3: WIRING AND HVAC SYSTEMS</b>					<b>(9)</b>
Types of wires, wiring systems and their choice –planning electrical wiring for building –main and distribution boards –transformers and switch gears –modern theory of light and color – synthesis of light –luminous flux –candela- lans of illumination-lighting design-design for modern lighting. Ventilation and its importance-natural and artificial systems-Window type and packaged air-conditioners-chilled water plant –fan coil systems-water piping –cooling load –air conditioning systems for different types of buildings –protection against fire to be caused by AC.Systems.					
<b>MODULE 4: FIRE SAFETY SYSTEMS</b>					<b>(9)</b>

Causes of fire in buildings-safety regulations-NBC-planning considerations in buildings like Non-combustible materials, construction, staircases and A.C. systems, special features required for physically handicapped and elderly in building types-heat and smoke detectors-dry and wet risers-Automatic sprinkler.

**MODULE 5: INSTALLATION AND MAINTENANCE OF SYSTEMS (9)**

Co-ordination and management of design and installation of various building services systems during the design and construction stages in particular the builder's works. Computer-aided design and installations of building services. Testing and commissioning of building services systems: fire safety systems, vertical transportation equipment ventilation systems, etc. Sick building syndrome. The impacts of life-cycle-cost on planning and implementation. An appreciation of capital and operating costs. Implication of low cost, inefficient equipment, poor installation, inadequate access for maintenance.

COURSE TITLE		RESOURCE MANAGEMENT AND CONTROL IN CONSTRUCTION			CREDITS	3
COURSE CODE		CEA4742	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%			ESE	50%
LEARNING LEVEL		BTL 2				
CO	COURSE OUTCOMES					PO
Students will be able to						
1.	Identify the resources required for construction project					1,2,7,10
2.	Apply principles of resource planning , utilization of resources with procurement and inventory control					1,2,7,10
3.	Implement the construction project by calculating the material, equipment and labour requirement in respect of productivity					1,2,7,10
4.	Apply principles of time management and cost control in planning and management of projects.					1,2,7,10
5.	Apply the method of resource allocation with use of computers in construction projects.					1,2,5,7,10
<b>Prerequisites:</b> Nil						
<b>MODULE 1: INTRODUCTION TO RESOURCES</b>						<b>(9)</b>
Introduction to resources, Characteristics of resources-Types of resources, manpower, Equipment, Material, Money, Time - Tools for measurement of resources.						
<b>MODULE 2: RESOURCE PLANNING</b>						<b>(9)</b>
Resource Planning- Planning for material, Labour, time and cost-Resources Utilization, material, Labour, time and cost - Procurement- inventory control						
<b>MODULE 3: MATERIAL, EQUIPMENT AND LABOUR</b>						<b>(9)</b>
Material: identification of materials, quantity of material, sources, Transportation, Delivery and Distribution- purchase management-store management. Equipment: types of equipment used in construction, Planning and selection of equipment, equipment maintenance and replacements of an equipment. Labour: Introduction to Labour, Classes of Labour, Cost of Labour, Labour schedule, optimum use Labour, labour productivity.						
<b>MODULE 4: TIME MANAGEMENT</b>						<b>(9)</b>
Time Management- planning and scheduling - Managing time on the project- forecasting the future, Critical path measuring the changes and their effects. Cost control- objectives of cost, time and quality ,Cash flows and cost control, Time-cost trade off.						
<b>MODULE 5: RESOURCE ALLOCATION</b>						<b>(9)</b>
Resource allocation- resource leveling, resource smoothing- - examples of resource list, Resource allocation graph, Resource loading- Computer application in resource management -Value Management.						
<b>TEXT BOOKS</b>

COURSE TITLE		FORENSIC ENGINEERING			CREDITS	3
COURSE CODE	CEA4743	COURSE CATEGORY	ELE	L-T-P	3-0-0	
CIA	50%			ESE	50%	
LEARNING LEVEL	BTL 2					
CO	COURSE OUTCOMES				PO	
Students will be able to						
1.	Describe the scope of forensic engineering, and be aware of the ethics and responsibilities.				1,2,4,7,10	
2.	Analyze and identify the different causes of failure in buildings and structures				1,2,4,7,10	
3.	Inspect failures and damages and conduct forensic investigations				1,2,4,7,8,10	
4.	Develop theoretical analyses and failure hypotheses for damaged structures.				1,2,4,7,8,10	
5.	Prepare forensic reports, be aware of legal issues and appear as expert witnesses.				1,3,7,10	
<b>Prerequisites : Nil</b>						
<b>MODULE 1: FORENSIC ENGINEERING PRACTICE</b>						<b>(9)</b>
Introduction- qualification of the forensic engineer, ethics and professional responsibilities, resource and professional organizations, opportunities in forensic engineering practice, learning from failures- historical context, definition, causes, failure reduction strategies, expert consultant and witness.						
<b>MODULE 2: CAUSES OF FAILURE</b>						<b>(9)</b>
Wind damage to residential structures, lightning damage, building collapse due to roof leakage, hail damage and water infiltration, damage due to blasts and explosion, fire, electrical shorting, industrial accidents, vehicle impact and traffic accidents, bridge failure.						
<b>MODULE 3 : INVESTIGATION OF FAILURES</b>						<b>(9)</b>
The first steps after a failure- safety, preserve perishable evidence, collapse configuration, reserving samples, failed and un failed components, documentation of conditions – photographs, video, interviews, field tests - civil engineering investigation, structural and geotechnical investigations, laboratory.						
<b>MODULE 4: INSPECTION ASSESSMENT</b>						<b>(9)</b>
Document collection and review, theoretical analyses, failure hypothesis, data analysis. Forensic inspection assessment of damage to residential buildings, concrete and steel structures, masonry structures, foundation walls, roof systems, bridges, traffic accident reconstruction.						
<b>MODULE 5: REPORTS AND LEGAL ASPECT</b>						<b>(9)</b>
Report- thinking and planning, conducting the investigation, data distillation and distribution, delivery. Forensic photogrammetry – photographic testimony and techniques, reconstruction methods. Legal concerns after failure – ethical consideration, claim analysis, litigation and dispute resolution.

Students will be able to						
1	Execute subsurface exploration and select appropriate drilling, sampling and field testing techniques for different soils.				1,2,3,9,10	
2	Design shallow foundation.				1,2,3,5,9,10	
3	Design deep foundation.				1,2,3,5,9,10	
4	Design foundations for tower and caisson foundation.				1,2,3,5,9,10	
5	Design machine foundation used in industrial structures.				1,2,3,5,9,10	
<b>Prerequisites:</b> Nil						
<b>MODULE 1: SUB SURFACE EXPLORATION</b>					<b>(9)</b>	
Purpose - Programme and Procedures - Interpretation of bore logs, soil data and exploration reports.						
<b>MODULE 2: SHALLOW FOUNDATIONS</b>					<b>(9)</b>	
Types of foundations and their specific applications - depth of foundation - bearing capacity and settlement estimates - structural design of isolated footings, strip, rectangular and trapezoidal combined footings - strap - balanced footings - raft foundation - Approximate flexible method of raft design - Compensated foundations.						
<b>MODULE 3: DEEP FOUNDATIONS</b>					<b>(9)</b>	
Types of Piles and their applications - Load capacity - Settlements - Group action - Design of piles and pile caps - Lateral load capacity of piles.						
<b>MODULE 4: FOUNDATIONS FOR BRIDGES AND OTHER MISCELLANEOUS STRUCTURES</b>					<b>(9)</b>	
Drilled shaft foundations and caissons for bridges - Foundations for towers - Chimneys - Silos - Structural Design of supports for foundation excavations - Design of Anchors.						
<b>MODULE 5: MACHINE FOUNDATIONS</b>					<b>(9)</b>	
Types - General requirements and design criteria - General analysis of machine-foundations-soil system - Stiffness and damping parameters - Tests for design parameters - Guide lines for design of reciprocating engines, impact type machines, rotary type machines, framed foundation

COURSE TITLE		DESIGN OF PLATES, SHELLS AND SPATIAL STRUCTURES		CREDITS	3	
COURSE CODE		CEA4746	COURSE CATEGORY	ELE	L-T-P	3 -0- 0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL3				
CO	COURSE OUTCOMES				PO	
The Students will be able to						
1	Describe Bending of rectangular and circular plates.				1,2,3,9,10	
2	Analyse and Design folded plates.				1,2,3,9,10	
3	Design cylindrical and circular shells.				1,2,3,9,10	
4	Describe the design concepts of space frames.				1,2,3,9,10	
5	Design space frames.				1,2,3,9,10	
<b>Prerequisites: Nil</b>						
<b>MODULE 1: THIN PLATES WITH SMALL DEFLECTION</b>					<b>(9)</b>	
Equation of equilibrium and deformation of plates - Bending of rectangular plates and circular plates. Navier's solution and Levy's method.						
<b>MODULE 2: ANALYSIS OF PLATES AND FOLDED PLATES</b>					<b>(9)</b>	
Energy method, finite difference and finite element methods for solution of plate bending problems. Principles of design of folded plates						
<b>MODULE 3: ANALYSIS AND DESIGN OF SHELLS</b>					<b>(9)</b>	
Geometry of shells - Classification of Shells - membrane theory of circular and cylindrical shells - Detailed Analysis and design of cylindrical shells - Detailing of Reinforcement in shells, edge beams and transfer beam						
<b>MODULE 4: DESIGN OF SPACE FRAMES</b>					<b>(9)</b>	
Space frames - configuration - types of nodes - general principles of design Philosophy - Behaviour.						
<b>MODULE 5: ANALYSIS AND DESIGN OF SPACE FRAMES</b>					<b>(9)</b>	
Analysis of space frames - Formex Algebra, FOR MAIN - detailed design of space frames						
<b>TEXT BOOKS</b>						
1	P.C.Varghese, Design of Reinforced Concrete Shells and Folded Plates,2010.					
2	Ramasamy, G.S. Design and Construction of Concrete shells roofs, CBS Publishers, 1986.					
3	J. N. Reddy Theory and Analysis of Elastic Plates and Shells (Series in Systems and Control) 2006

2	Proceedings of International Conference on Space structures, Anna University, November 1997.					

COURSE TITLE		PRE-FABRICATED STRUCTURES			CREDITS	3
COURSE CODE		CEA4747	COURSE CATEGORY	ELE	L:T:P	3-0-0
CIA		50%			ESE	50%
LEARNING LEVEL		BTL - 4				
CO	COURSE OUTCOMES					PO
<b>The Students will be able to</b>						
1	Describe prefabrication system					1,2,3,4,5,6,12 ,PSO 1,2
2	Describe various Prefabricated components					1,2,3,4,5,6,12 ,PSO 1,2
3	Adopt the principles involved in prefabrication					1,2,3,4,5,6,12 ,PSO 1,2
4	Describe the joints involved in structural connections					1,2,3,4,5,6,12 ,PSO 1,2
5	Design prefabrication components for earthquakes and cyclones					1,2,3,4,5,6,12 ,PSO 1,2
<b>Prerequisites : Construction Techniques Equipment &amp; Practices</b>						
<b>MODULE 1: INTRODUCTION</b>						<b>(9)</b>
Need for prefabrication - Principles - Materials - Modular coordination - Standardization - Systems - Production - Transportation - Erection.						
<b>MODULE 2: PREFABRICATED COMPONENTS</b>						<b>(9)</b>
Behaviour of structural components - Large panel constructions - Construction of roof and floor slabs - Wall panels - Columns - Shear walls						
<b>MODULE 3: DESIGN PRINCIPLES</b>						<b>(9)</b>
Disuniting of structures- Design of cross section based on efficiency of material used - Problems design because of joint flexibility - Allowance for joint deformation.						
<b>MODULE 4: JOINT IN STRUCTURAL</b>						<b>(9)</b>
Joints for different structural connections - Dimensions and detailing - Design of expansion joints						
<b>MODULE 5: DESIGN FOR ABNORMAL LOADS</b>						<b>(9)</b>
Progressive collapse - Code provisions - Equivalent design loads for considering abnormal effects such as earthquakes, cyclones, etc., - Importance of avoidance of progressive collapse.

COURSE TITLE		PROJECT ECONOMICS AND FINANCIAL MANAGEMENT			CREDITS	3
COURSE CODE		CEA4748	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%			ESE	50%
LEARNING LEVEL		BTL 2				
CO	COURSE OUTCOMES					PO
Students will be able to						
1.	Describe economics in relation to civil engineering, market demand and supply choice of technology					1,7,9
2.	Apply knowledge of construction economics in housing, transport, infrastructure, environment, materials and labour.					1,2,3,7,9 10
3.	Apply principles of finance in borrowing, generation of funds, budgeting, analysis of financial statement, balance sheet, Investment and financing decision.					1,2,3,5,7,9
4.	Identify and apply different accounting methods in different stages of completion of projects and be aware of tax reporting.					1,2,5,7,9,1 0
5.	Describe and identify security and risk aspects in the loans and interim construction financing.					1, 7,8,9, 10
<b>Prerequisites : Nil</b>						
<b>MODULE 1: ECONOMICS</b>						<b>9</b>
Role of Civil Engineering in Industrial Development-Advances in Civil Engineering and engineering economics-Support matters of Economy as related top Engineering-Market demand and supply-Choice of technology- Quality control and Quality Production-Audit in economic law of returns governing production.						
<b>MODULE 2: CONSTRUCTION ECONOMICS</b>						<b>9</b>
Development in housing, Transport and other infrastructures-Economics of Ecology, environment, energy resources-Local material selection-Form and Functional designs-Construction workers-Urban problems-Poverty-Migration-Unemployment-pollution.						
<b>MODULE 3: FINANCING</b>						<b>9</b>
The need for financial management-Types of financing-Short term borrowing-Long term borrowing-Leasing -Equity financing-Internal generation of funds-External commercial borrowings-Assistance from Government Budgeting support and International finance corporations-Analysis of financial statements-Balance sheet-Profit and loss account-Cash flow and fund flow analysis-Ratio analysis-Investment and financing decision-Financial control-Job control and Centralized management.						
<b>MODULE 4: ACCOUNTING METHOD</b>						<b>9</b>
General Overview-Cash basis of accounting-Accrual basis of accounting-Percentage completion method-Completed contract method-Accounting for Tax reporting purposes and Financial reporting purposes.						
<b>MODULE 5: LENDING TO CONTRACTORS</b>						<b>9</b>
Loans to Contractors-Interim construction financing-Security and risk aspects.

COURSE TITLE		CONSTRUCTION EQUIPMENT MANAGEMENT		CREDITS	3	
COURSE CODE		CEA4749	COURSE CATEGORY	ELE	L-T-P	3-0-0
CIA		50%		ESE	50%	
LEARNING LEVEL		BTL 2				
CO	COURSE OUTCOMES				PO	
Students will be able to						
1.	Describe the equipment management in construction projects.				1,2,3,7,9	
2.	Explain the various construction equipment involved in earth work excavation				1,2,7,9	
3.	Identify and explain the different components involved in under water and underground equipment.				1,2,7,9	
4.	Describe the basic concept of different material handling techniques in construction				1,2,7,9	
5.	Identify the latest equipment involved in aggregate production, concreting, asphalt mixing and laying				1,2,3,7,9	
<b>Prerequisites : Nil</b>						
<b>MODULE 1: CONSTRUCTION EQUIPMENT MANAGEMENT</b>					<b>(9)</b>	
Identification-Planning-Equipment management in projects –Spare Parts Management- Economics of construction Equipment-Maintenance management- Replacement-Cost control of Equipment-Depreciation Analysis-Safety Management						
<b>MODULE 2: EQUIPMENT OF EARTHWORK</b>					<b>(9)</b>	
Fundamentals of earthwork operations- Equipment for compaction -Earth moving operations- Types of Earthwork Equipment-Tractors, Motor Graders, Scrapers, Front end waders, Earth Movers.						
<b>MODULE 3: OTHER CONSTRUCTION EQUIPMENT</b>					<b>(9)</b>	
Equipment for Dredging, Trenching, Tunnelling, Drilling, Blasting- Erection Equipment-Types of pumps used in construction-Equipment for Dewatering and Grouting-Foundation and Pile Driving Equipment.						
<b>MODULE 4: MATERIALS HANDLING EQUIPMENT</b>					<b>(9)</b>	
Forklifts and Related Equipment-Portable Material Bins-Conveyors-Hoists, Cranes, Hauling Equipment.						
<b>MODULE 5: AGGREGATE PRODUCTION, CONCRETING AND ASPHALT EQUIPMENTS</b>					<b>(9)</b>	
Crushers-Feeders-Screening Equipment-Handling Equipment-Batching and Mixing Equipment Asphalt mixing plant, Asphalt laying Equipment, Air compressors-Equipment Hauling, Pouring and Pumping Equipment-Transporters.
